## A Payment System That Makes Cryptocurrency Payments and Purchases Easy and Convenient

For merchants, the VISO payment system creates an ecosystem for accepting cash and cash-free payments—including cryptocurrency payments—via SMART terminals. For private customers, the VISO payment system creates a wallet with a capability to issue bank cards, including the instantaneously issued cards for paying online and via bank terminals accepting contactless payments.

## What Problem Does VISO Resolve?

Most countries forbid the acceptance of cryptocurrency payments. The VISO payment system converts cryptocurrency into fiat currency for payments at precisely the time of purchase, enabling both the payer and the buyer to comply with the law. Furthermore, points of sale are overwhelmed with devices. VISO SMART terminals replace bank terminals, fiscal cash registers, payment terminals, and cryptocurrency-accepting devices.

## How Does the VISO Payment System Work?

The VISO payment system operates as a standalone third-party processing integrated with a mobile wallet and a cryptocurrency exchange. The processing is planned for launch in Georgia under the Payment System Operator license of the National Bank of Georgia and the TPP and MSP licenses of the international payment systems VISA and MasterCard. SMART terminals will initially be installed in Georgia, while VISO wallet and cards are to be made available around the globe.

## What Is the Readiness of the VISO Technologies?

SMART terminals are made in China at WangPOS [wangpos.com](http://wangpos.com) facilities.

SMART terminals are connected to the preprocessing developed by the CCT company [m4bank.ru](http://m4bank.ru).

The preprocessing is certified by the VISA and MasterCard payment systems. VISO cards are issued using the processing of D8Corporation [d8corporation.com](http://d8corporation.com).

The VISO Exchange for cryptocurrency will be launched using the technologies of the already operational EXMO exchange [exmo.com](http://exmo.com).

**To launch the project, the VISO company needs only to develop the VISO Wallet and link the technologies. The other technologies are ready for operation.**

## The VISO Company's History

The VISO company's founders currently own stakes in the following companies:

**CCT**—a leading vendor in the market for banking solutions for bank card acquiring. **Founded in 2011.**

**PayMob**—a CCT subsidiary providing various acquiring services. **Founded in 2014.**

**Mrchevli Audit**—an audit and law firm. **Founded in 1996.**

**Nova Credit**—a microfinance company. **Founded in 2010.**

**L.B. Invest**—a cashier equipment vendor that has distributed over 500,000 cashier machines in Georgia.

**Founded in 2002.**

## How Will VISO Make the World a Better Place?

Shopping is a daily routine for both the seller and the buyer. The outdated technologies powering the proprietary platform-based fiscal cash registers and bank terminals fall behind modern-day smartphones in terms of functionality and convenience. VISO delivers the kind of payment convenience that will take the daily stress off millions of people.

## VISO Token (VITO)

The VITO token is used in the VISO payment system as a settlement cryptocurrency and a means of paying commissions.

VISO Token Pre-Sale will run from **September 25 to October 25, 2017.**

VISO Token Private Sale will run from **November 1 to November 25, 2017.**

VISO Token Open Sale will run from **November 26 to March 15, 2018.**

**Target: \$25 million**

**Supply: 1,000,000,000 VITO**

THE DISTRIBUTION OF TOKENS
